**Notes:** a), b), c) and d) The Labour Force Survey is a sample survey and the resulting estimates imply a certain inaccuracy. The relative standard deviation (coefficient of variation) is very small for the majority of variables considered in this publication (<10%). However, occasionally and especially for some variables of minor quantitative importance, it may exceed the threshold of 20%. When the threshold of 20% is slightly exceeded, data are marked (**\$**) and should be analysed carefully.

Data were recomputed from population estimates which, in turn, were calculated from the final results of Census 2001; it was also considered the new Nomenclature of Territorial Units (NUTS 2002).

The "job search duration" variable does not include unemployed individuals who are no longer looking for work as they have found employment and are due to start in the next three months. This is why the sum of the number of unemployed by job search duration may be less than the total no. of unemployed.

**Notes:**

a) The Private Higher Education institutions include the Universidade Católica Portuguesa (Portuguese Catholic University);

a), b), c) and e) One institution is counted as many times as education levels it offers. The pre-primary education does not include child and communitarian animation centres as well the itinerant pre-primary education. The 2nd cycle includes the Mediated Basic Education institutions. The education and training courses are included in the respective level of education.

b), c) and e) Vocational schools formerly presented in separate (previously included in the item "Vocational schools" no matter the education level provided) are now comprised in other typologies of education and training institutions; this results from vocational/training education being not exclusive of vocational schools anymore, and may now be provided by basic and secondary education schools too.
